Introducing Voyageur

A New Data Collection Application is Coming

Dear Member Carrier,

MWCIA is pleased to introduce **Voyageur**, our next-generation workers' compensation data collection application, planned for implementation in late spring **2027.**

Voyageur will modernize how data is submitted, processed, and managed. The new application is designed to provide a more intuitive, efficient, and flexible experience while strengthening the foundation for MWCIA's data collection services.

What to Expect

- **Manage Policy System and Manage USR System** will be retired when Voyageur goes live.
- Carriers will have the flexibility to submit **WCPOLS and WCSTAT** files through CDX or directly to us through Voyageur.
- Voyageur will make it easier to access information, review submissions, and make corrections.

No action is required from carriers at this time. For questions about Voyageur, please contact **Voyageur@mwcia.org.**

Over the coming months, we will share information in stages about what is changing and what to expect, along with training opportunities, guidance, and resources to help you prepare.

Voyageur is an important step forward in how we serve our carrier members. We look forward to supporting you and providing the information needed for a successful implementation.

Thank you for your continued partnership.

Sincerely,

Jennifer Wolf
President & CEO
